

Search, Dispatch & Routing

Omatic GPS 'Dispatch' – A combined Routing, Search & Dispatch control panel with some advanced features. 'Dispatch' is accessible directly from our well established tracking dashboard. There are two options available; a) Routing and b) Search & Dispatch

Routing:

Start location can be established in several ways now; Type the address, Get the current location of the selected vehicle, Select vehicle/POI from the drop down menu or click point on the map. End location can be typed address, Select vehicle/POI from the drop down menu or click point on the map. This will allow end user to not only efficiently create the route but create it quickly using alternate options.

Search & Dispatch:

Search & Dispatch can be established in several ways now; Type the address, Get the current location of the selected vehicle, Select vehicle/POI from the drop down menu or click point on the map. Then enter radius to find vehicle(s) nearest to the location. This will allow end user to quickly search nearest vehicle and make dispatch of its resources for the maximum benefits.

Fleet Management

Omatic Intelligent GPS Fleet & Mobile Resource Solution provides everything you need from a GPS real time tracking system. Enables users to locate vehicles, view vehicle/driver attributes and dispatch jobs based on the position as shown on the map. The system incorporates comprehensive reporting to show driver hours, replay routes, show distance travelled, idle times, exception reporting and many more features.

- Real Time Location
- Replay Vehicle Location History
- Real-time Alerts & Notification
- Fleet Status Monitoring
- Multiple and Customized Reports
